WIKI Research

I use stack overflow because it has lots of helpful information about programming and software development. When I had problems with my code before, I have asked for help on stack overflow, and the community there has always been quick to offer solutions. Even though it's not set up like a traditional wiki with fancy titles and tables of contents, it's easy to use and gets straight to the point. You can start a conversation or get help right away without any fuss.

For this project, I made a basic wiki using Notion. I added important stuff like a table of contents, an overview, key ideas and definitions, steps or methods, and tips for doing things well. These are some of the things you usually find in a regular wiki.

Please find the attached link a demo wiki I created on notion on space exploration: https://continuous-crate-54b.notion.site/Space-Exploration-d742575c2cc349cd9244d0f1c58ca9bf
